

# Testing the effectiveness of a mobile phone-based screening tool to identify children who may have Autism Spectrum Disorder.

## What does this study involve?

- A 45 minute visit with Thompson Center staff.
- Questionnaires about your child's developmental history.
- The REACH app featuring a series of short, engaging videos on a mobile phone.

## Is my child eligible?

Children between 12-36 months may be eligible for this study. A diagnosis of autism is NOT required.

**Participants will be compensated \$25 for their time and effort.**

**Interested? Scan the QR code to see the screening form.**
